

**Press Release, June 20, 2008:** Phillip Vick, formerly of Stanadyne Corp. and TRW, Inc., has recently joined the staff at ECVC (Eastern Carolina Vocational Center) as Safety Manager. Phil comes to ECVC with a background in safety and environmental engineering as well as multifunctional engineering with significant experience in plant/facilities engineering.

Vick , originally from Morehead City, NC, is a graduate of ECU with a BS in Industrial Technology. After graduating from college, he spent several years in Kansas with Beech Aircraft and Boeing before joining TRW, Inc. in Greenville, NC in 1985. When TRW closed its Greenville plant in 2004, Phil was employed by Stanadyne Corp. in Washington, NC.

ECVC , a not-for-profit business whose mission is to provide vocational opportunities for people with disabilities, has eight contracts with the federal government for manufacturing and packaging plus numerous commercial contracts. In December 2007 began providing third party logistics services as one of the subcontractors for a ten year \$6.1 billion contract providing warehouse and distribution of oils and lubricants to the military. Due to a doubling in size in the last two years ECVC now has a total of 270,000 square feet of warehouse and manufacturing space at three locations and over 240 employees. The larger size of the business has made it necessary to have a full time environmental, health, and safety manager. Phil, with his wealth of experience, will be a huge asset to ECVC.
